

THE VETERINARY INTELLIGENCE COMPANY

The Next 90 Days

July → October 2026 · One commercial interface, powered by two reinforcing engines.

WHAT WE LEARNED · WE PRESSURE-TESTED IT WITH THE TEAM AND WITH CUSTOMERS

"You've got a horse that can run here. A thoroughbred — and we're treating it like a mule."

ANDREW CHISHOLM, PHIBRO · JULY 8

He's not knocking the team or the data — he's saying **the data is powerful, and customers can't fully use it yet**. Closing that gap is the whole opportunity.

THE VISION HOLDS UP

- Customers want to "run through our pipes" to reach the market.
- The thesis lands — the open question is how we grow each account.

THE DATA IS VALUABLE

- But some only need part of it, or treat it as a one-time buy.
- A static CSV can't anchor the relationship — so we can't grow it.

THE CONTENT IS TRUSTED

- But it's getting commoditized — more competition, AI everywhere.
- Today we can't measure it: only ~1% click through the PDF.
- Our edge is original stories and contributors no one else has.

THE VISION

Become the **commercial interface** for veterinary intelligence.

Today, Antelligence runs as three siloed units — **data, subscriptions, and ads** — built up one at a time. There are so many linkages between them we can build and align that they become **one interface**, each side making the others stronger.

"To successfully sell anything to veterinarians, you want to run through our pipes."

OUR NORTH STAR

TWO PRODUCTS, COMING TOGETHER

Data and Content — built separately, now they link up.

THE DATA ENGINE

■ Data

More data, connected to more places, served up more frequently. The living, verified view of the market — practices, people, shelters, vendors, software, history — that customers work inside, connect to their CRM, and see change over time.

THE CONTENT ENGINE

■ Content

Automate the manual steps so we can drive a personalized aggregation feed **plus original content only we can produce** — trusted reach we can finally measure and aim.

Built in a legacy way, one piece at a time. The opportunity is the loop between them.

THE FLYWHEEL • WHY IT COMPOUNDS

1 Enterprise Data Sales

Enterprise customers pay for proprietary vet intelligence. Revenue funds the entire system.

- ZOETIS
- MERCK
- BOEHRINGER
- 20+ CUSTOMERS

2 Product Expansion

Data revenue funds new products — each one a data-collection surface.

- SALES INTELLIGENCE
- EXEC DASHBOARDS
- NEWS ALERTS
- AI RESEARCH AGENTS

3 Network Growth

Products pull more vet professionals in. Every user expands reach and data coverage.

- SALES REPS
- VETERINARIANS
- INDUSTRY BUYERS

4 Deeper Data Collection

Network interactions generate proprietary signal — closing the loop.

- APP USAGE
- CONTENT ANALYTICS
- DIRECT SURVEYS

Same trusted data — a completely different product.

	THE CSV — TODAY	THE PLATFORM — WHERE WE'RE GOING
FRESHNESS	A static snapshot	Living & verified, moving toward real-time
USE	One-time, or only part of it	Recurring, everyday use inside their workflow
STORY	No story around it	The change story built in — ~20K of 30K practices change each quarter
VISIBILITY	We can't see how it's used	We see exactly how it's used
RELATIONSHIP	Can't anchor the account	Connected to their CRM — anchors and grows it

| This is why the same data can command far more: it stops being a file and becomes the surface they work in every day.

LIVE DEMO SEE IT WORKING

The spend grows **two ways.**

1 • CONNECT MORE

More **data** (workforce, shelters) • more **frequency** (toward real-time) • more **connections** (CRM). The breadth of what they get from us.

2 • DO MORE WITH IT

Applications on top of the data — we help automate their **review process**, territory planning, and competitive intelligence. The value isn't just the data; it's what they can do with it.

■ ■ ■

Clinic & workforce view
Every clinic, the people inside it, and how they move — live.

■ ■ ■

Vendor comparison
Who uses what software and services, side by side.

■ ■ ■

Custom reports
Ask a question, get a reusable, sourced answer.

■ ■ ■

Change tracking
Follow an account and see what changed since last quarter.

Ben walks the team through it live (3–4 min) — the point: this is a **2–4× spend** a CSV could never reach.

THE COMMERCIAL PIPELINE · WHAT'S COMING UP, AND WHERE WE WANT EACH ACCOUNT

The accounts coming up — and where we're taking them.

RENEWING NOW

**Scribenote · Gateway
Pegasus · CareVet · United Pet**

Move to: renew onto the platform, not a CSV.

WIN BACK

**Teravet (lapsed)
Chewy**

Move to: re-engaged on the change story.

EXPAND

**Hills · Wedgewood
Cubex · Felix**

Move to: both datasets, shelters, workforce — bigger asks.

VANE & STARTUPS

**VANE-referred
startups**

Move to: onboard the cohort onto the platform.

Every renewal is a discovery call and a platform demo — **your data is out of date, and here's how much changed.**

THE CONTENT ENGINE · AUTOMATE, PERSONALIZE, INTEGRATE

Free the team from manual work — then make content **personal and measurable**.

AUTOMATE

The Newsfeed Intake Agent scans hundreds of sources daily against our legacy archive; add Bitly tracking. The team gets promoted to **doubling down on taste** — not the effort of finding the stories.

PERSONALIZED, DATA-DRIVEN ENGAGEMENT

Bring the data **into the platform** so readers choose the feeds that make sense to them, connected to the data — engagement that's personal, not generic.

EDITORIAL RELATIONSHIPS

Use our data to drive **unique, data-led stories** that promote the EPD/IPD to the people who buy it — the relationships and proprietary data only we can create.

THE PLAN ON ONE PAGE · DATA · COMMERCIAL PLAN · CONTENT

It only works if the three lanes **move together**.

LANE	FIRST 30 DAYS	DAYS 30-90	AFTER DAY 90
Data	> Ship the new CSV refresh; load current + historical data into the platform > Stand up verification in the platform	> Onboard customers; enrich the dataset with their data > Understand our customer base + track performance > Launch workforce & shelter datasets; prove the CRM connection	> More frequent refresh > Vendor / software / financial data
Commercial Plan	> Discovery on every renewal call > Select anchor accounts	> Platform demos → renewals & expansion > Automate proposals	> Bundled offers & partnerships > Subscription renewal rhythm
Content	> Automate news discovery; add story-level tracking > Personalized, data-led stories that promote the EPD/IPD	> Bring content into the platform > Publish first data stories; grow editorial relationships	> Product launch + market-research push > Expand the contributor network

WHAT WE'RE BUILDING TOWARD · WHAT MUST BE TRUE ON OCTOBER 8

What must be true by October 8.

☐ **July data set refreshed & loaded**

the core promise, protected · Paul·Ben

☐ **Story-level measurement live**

we can finally see what resonates

☐ **First CRM connector launched**

Ben·Paul

☐ **Head of Content hired**

a commercial leader to grow 30K → 100K readers

☐ **~\$260K booked**

on track to ~\$500K H2 revenue

☐ **Platform live; customers onboarded**

report / list / question · Ben

☐ **Workforce & shelter dataset launched**

Ben·Helena

☐ **Newsletter production largely automated**

team freed for higher-value work

☐ **Pricing-data access secured**

or a clear route confirmed

☐ **Additional \$500K raise — a target**

toward the broader \$2M round

| These are the targets we've represented to our investors — the ones we all rally behind. Booked = signed, not collected.

KEY MILESTONES · THE MOMENTS THAT MAKE IT REAL

We're building toward **dated moments**, not vibes.

AUG 28 – SEP 1 KC Animal Health Corridor Go public inside the animal-health ecosystem — the company and website reveal.	OCT 1 – 3 Vet Together, Las Vegas Prove the commercial interface with real buyers, vendors, data, and content.
---	--

~Jul 21	Vet Together follow-up — 2026 plan + platform demo	The partnership path is real
Jul 31	July refresh shipped + platform load reconciled	The core promise is protected
Sep 30	Booked-revenue checkpoint + first CRM connector live	The commercial engine works
Oct 8	90-day retro + fall decisions, with evidence	We decide with evidence

WORKING TOGETHER

One system only works if everyone works in it.

WHAT WE NEED FROM YOU

- > **Work from the shared system** — Notion is the company brain.
- > **Make blockers visible early** and own one measurable outcome.
- > **Feed the loop** — after every call, log the decision and the data that would help.

HOW WE'LL SUPPORT YOU

- > **Office hours + 1:1s** — hands-on onboarding to the tools.
- > **Training** — Looms, walkthroughs, shared skills.
- > **We build with you** — real support first, before we ask you to work the new way.

One company. One system. **Data** is the engine,
content is the reach — and together they compound.

APPENDIX HOW WE GOT HERE · WHY NOW

Built one piece at a time — now the moment is right.

HOW IT WAS BUILT

A trusted publication came first. Then ads, to support it. Then a database, because the industry needed it and the other lines couldn't fund everything alone. Each piece was added on its own — and it made sense at the time.

WHY NOW

The market changed: more competitors (everyone launched a newsletter), cloud and AI put data work within reach, and customers expect more. We're still the trusted source — and technology now lets us **sprint past**, not just keep ahead.

| The pieces were always meant to support each other. This is the quarter we finally wire them together.

A contained proof of the commercial interface.

BEFORE THE EVENT ➤ Recruit qualified practices via the Fountain Report + native content ➤ Match our ~30K audience against Vet Together’s target profiles ➤ Earn \$500 / qualifying independent, \$1,000 / corporate referral ➤ Load attendee & account data into the platform; prep vendor briefs	DURING · OCT 1-3 ➤ Give vendors trial platform access, conference accounts preloaded ➤ Support meeting prep with company, practice & people intelligence ➤ Use the show as a customer-learning and product-proof moment	AFTER THE EVENT ➤ Produce vendor scorecards + measurable account outcomes ➤ Verify whether practices changed vendors, tools, or purchasing ➤ Turn event signals into data-led content; design the 2027 partnership	
1,200–1,500 DECISION-MAKERS	175–225 VENDORS	25,000+ 1:1 APPOINTMENTS (LAST SHOW)	~85% OF THEIR VENDORS DON'T YET SPEND WITH US

How Vet Together describes their calendar: one "Super Bowl" a year, and little else. That’s exactly where we fit — content creates year-round engagement, data makes each interaction more valuable, the platform compounds the signals. (Paraphrase — direct quote pending verification.)

We automate the same way every time.

1 Observe Understand the real workflow.	2 Build A narrow agent for the manual part.	3 Dogfood Against what we've already done.	4 Introduce Hand it to the workflow's owner.	5 Transition Off the manual way.
--	--	---	---	---

- BE TRANSPARENT
- BE PROACTIVE
- BE CURIOUS
- UPSKILL YOURSELF
- FIRE YOURSELF FROM TASKS

Automation removes retrieval, formatting, and admin — so people spend time on judgment, taste, and relationships.

The job board is the wedge; the **people graph** is the compounding asset.

- 1 Map job opportunities** — open roles, hiring clinics, systems, geography. The first workforce signal layer.
- 2 Launch the veterinary job board** — structured supply from day one; VSI reaches 650 vet students, Fountain distributes to 30K.
- 3 Turn resumes into living artifacts** — students verify clinic history and systems exposure; each one verifies 2–4 clinics.
- 4 Power recruiting and knowledge work** — the people graph supports recruiting, enrichment, QA, expert review, and AI workflows.

Decision-ready at day 90, built in the fall. It gives veterinary professionals a reason to join and maintain their own records — which makes workforce data self-sustaining.
